Experience

Resonate Health, LLC | Remote
WordPress Developer | 07/2025 - Present

- Own end-to-end delivery of product features for a WordPress-based healthcare platform, turning ambiguous requirements into scoped work, intuitive user experience, and maintainable custom plugins. (WordPress, PHP, JS, CSS, REST API)
- Designed and implemented an AI-powered knowledge layer: ingestion + chunking pipeline, embeddings, vector search, and a secured external service, integrated back into WordPress via authenticated endpoints. (Ollama, Qdrant)

CareValidate, Inc. | Remote
Front End Developer | 02/2023 - 01/2024

- Built and supported a production SaaS application end-to-end, owning backend services and a TypeScript front end while shipping features through code review, testing, and CI/CD. (Node.js, Postgres, Vue, TypeScript, Apollo/GraphQL)
- Main project: delivered an HR accommodations request platform to streamline intake, review, decision workflows, enabling faster processing and clear auditability for internal stakeholders.
- Contributed to an AI assistant initiative by implementing/supporting parts of the stack and product integration. (Python, LangChain, Next.js, OpenAI/ChatGPT API)

ANDMORE (formerly International Market Centers) | Remote
Front End Developer | 03/2020 - 11/2022

- Delivered front-end features for a large B2B ecommerce ecosystem, translating Figma designs into production UI and integrating evolving APIs. (Vue, TypeScript, Swagger/OpenAPI)
- Maintained and evolved a shared Vue component library used across multiple apps to improve consistency.
- Main project: built and enhanced a “Super Admin” internal platform that connected multiple tools in the product suite and standardized cross-app workflows. (Vue , Typescript, Pinia, shared component library)

RepZio, LLC | FL, Juno Beach
Front End Developer | 02/2019 - 03/2020

- Shipped frontend work in a demo-driven environment: implemented Vue/TypeScript features from loose requirements, integrated in-progress APIs, mocked data as needed, and performed hands-on QA. (Vue, TypeScript, Swagger/OpenAPI)
- Main project: rebuilt a legacy CMS into a modern white-labeled website builder, expanding available page elements and improving the editing experience.
- Main project: built a sales commissions application from the ground up in parallel with a .NET backend.

Origin Code Academy | CA, San Diego
Instructor | 11/2017 - 12/2018

- Built internal tools to streamline operations (progress tracking, assessments, attendance workflows) and reduce manual overhead for staff. (MongoDB, Express, React, Node.js)
- Main project: developed an in-house Learning Management System for courses, progress, attendance, and student workflows.
- Side project: created a barcode-based student check-in system using a Raspberry Pi + scanner, with a lightweight Python script sending scans to a Node.js endpoint to log check-in/out events.

LanTrax, Inc. | NY, Buffalo
Front End Developer | 11/2016 - 11/2017

- Built internal applications in Visual Studio, delivering User Interface and backend features. (VB.NET, SQL Server, HTML, CSS, JavaScript, jQuery, RegEx)
- Wrote and refined SQL Server queries for reporting and operational workflows, supporting reliable day-to-day business functions.
- Maintained an email ingestion pipeline using highly specific regular expressions to normalize inbound messages into structured application data.
